

Project Initialization and Planning Phase

Date	29 September 2026
Team ID	SWTID-2026-2867
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	3 Marks

Define Problem Statements (Customer Problem Statement Template):

The project focuses on restricting access to records in ServiceNow based on the value of a field. Users should be able to view only the records permitted for their branch, while administrators should have full access. Script-controlled ACLs are used to combine role-based and field-based conditions.

Problem Statement:

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	A ServiceNow user who needs access to institution records.	View the records allowed for my branch.	I should not be able to view records belonging to other branches.	Records must be protected using roles and the Branch field value through a script-controlled ACL.	Secure and confident that I can access only the records I am permitted to view.

Project Objective:

To implement a Script-Controlled Access Control List (ACL) in ServiceNow so that users with the required roles can view records only when the Branch field matches the permitted branch, while administrators retain full access.
