

Problem-Solution Fit

Date	29 September 2026
Team ID	SWTID-2026-2867
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Problem-Solution Fit Canvas:

The Problem-Solution Fit canvas below describes the target users, their access-control problems, triggers, emotions, root cause, existing solutions, expected behaviour and the proposed Script-Controlled ACL solution.

1. CUSTOMER SEGMENT(S) [CS] • ServiceNow administrators • Faculty / staff users • Authorized branch users • Users accessing institution records	6. CUSTOMER LIMITATIONS [CL] [e.g. BUDGET, DEVICES] • Manual access management is time-consuming • Users may see records outside their branch • Requires simple, low-code administration	5. AVAILABLE SOLUTIONS PROS & CONS [AS] • Role-based ACLs – simple, but broad access • Field-based conditions – useful, but less flexible • Manual filtering – easy, but not secure
2. PROBLEMS / PAINS + ITS FREQUENCY [PP] • Unauthorized branch records may be visible • Same-role users may access unwanted records • Repeated access checks are difficult to maintain • Occurs whenever users view institution records	9. PROBLEM ROOT / CAUSE [RC] Access is not sufficiently controlled at the record level based on the Branch field. A user with the required role may be able to view records belonging to other branches.	7. BEHAVIOR – ITS INTENSITY [BE] • Users expect only permitted records • Admins need full access • Branch users need restricted access
3. TRIGGERS TO ACT [TR] • User opens a record • User searches or lists records • User attempts to view records from another branch	10. YOUR SOLUTION [SL] Implement a Script-Controlled ACL on the <code>u_institution_details</code> table. The ACL checks the logged-in user's role and the record's Branch value. Users with the required roles can view only EEE branch records, while administrators retain full access. A Delete ACL can additionally restrict deletion using role <code>bb4</code>.	
4. EMOTIONS BEFORE : AFTER [EM] BEFORE: • Confusion • Security concern • Lack of control AFTER: • Confidence • Controlled access • Better security		8. CHANNELS OF BEHAVIOR [CB] ONLINE: ServiceNow instance OFFLINE: Admin / staff workflow
