

Code-Layout, Readability and Reusability

Date	29 September 2026
Team ID	SWTID-2026-2867
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Code-Layout, Readability and Reusability:

This document evaluates the quality of the codebase in terms of its structure, readability, and reusability. The Script-Controlled ACL solution uses clear naming, organized scripts, comments, modular logic, and field-value based access control to make the solution maintainable and reusable.

Code Layout Checklist:

S.No	Code Quality Parameter	Description	Followed (Yes / No / Partial)	Remarks
1	Consistent Indentation	Uniform spacing/tabs used throughout the code	Yes	Code is properly formatted
2	Proper File Structure	Files and scripts are logically organized	Yes	ACL scripts and configurations are organized
3	Meaningful Variable Names	Variables reflect their purpose clearly	Yes	Variables use understandable names
4	Function / Method Names	Functions are descriptively named	Yes	Functions describe their purpose
5	Code Comments	Inline and block comments explain logic	Yes	Important ACL logic is commented
6	Modular Design	Code is split into reusable functions/modules	Yes	Access logic can be reused
7	No Redundant Code	Duplicate or unused code is removed	Yes	Unnecessary code is avoided
8	Error Handling	Exceptions and errors are handled carefully	Yes	Access is denied safely when conditions fail

Reusable Components / Modules:

S.No	Component / Module Name	Language / Technology	Where Reused	Reusability Level
1	ACL Access Control Script	JavaScript / ServiceNow	Record access control	High
2	Field Value Validation	JavaScript	ACL condition checking	High
3	User Role Validation	ServiceNow ACL	Different secured records	Medium
4	Script Include	JavaScript / ServiceNow	Common access-control logic	High
5	Record Security Rule	ServiceNow ACL	Multiple tables/records	Medium

Overall Code Quality Assessment:

Aspect	Rating (1-5)	Comments
Code Layout & Structure	5	Code is logically structured and organized
Readability	5	Meaningful names and simple logic

		improve readability
Reusability	4	Common access-control logic can be reused
Documentation / Comments	4	Important ACL logic is documented
Overall Score	4.5 / 5	Clean, readable and reusable implementation

Project Description

Script-Controlled ACL – Restrict Record Access Based on Field Value is a ServiceNow security solution that uses an Access Control List (ACL) with JavaScript to control whether a user can access a record. The ACL checks a particular field value and allows or denies access according to the defined condition. This helps protect sensitive records and provides controlled, rule-based access.
