

Performance Testing

Field	Details
Date	29 September 2026
Team ID	SWTID-2026-2867
Project Name	Script-Controlled ACL – Restrict Record Access Based on Field Value
Maximum Marks	5 Marks

Performance Testing

Performance testing evaluates how the system behaves under expected and peak load conditions. This document records testing scenarios, expected outcomes, performance metrics, and observations for the Script-Controlled ACL.

Step 1: Testing Overview

Field	Details
Testing Tool Used	Postman
Type of Testing	Load Testing
Target Module / API	Script-Controlled ACL / Record Access
Test Environment	ServiceNow Cloud
Test Date	29 September 2026

Step 2: Test Scenarios

S.No	Test Scenario / Description	No. of Virtual Users	Duration (sec)	Expected Outcome
1	User accesses a record with an allowed field value	10	60	Access should be granted
2	User accesses a record with a restricted field value	10	60	Access should be denied
3	Multiple users access records simultaneously	25	60	ACL should correctly restrict access
4	High number of record-access requests	50	120	System should remain responsive

Step 3: Performance Test Results

S.No	Metric	Target Value	Actual Value	Status (Pass / Fail)	Remarks
1	Response Time (Avg)	< 2 seconds	To be measured	—	ACL validation
2	Response Time (Max)	< 5 seconds	To be measured	—	Under load
3	Throughput	—	To be measured	—	Requests/sec
4	Error Rate	< 1%	To be measured	—	Access requests
5	CPU Utilization	< 80%	To be measured	—	During testing
6	Memory Utilization	< 80%	To be measured	—	During testing

Step 4: Observations & Analysis

Key Findings: The ACL script checks the field value before allowing the user to access the record. Authorized records are accessible, while restricted records are denied.

Bottlenecks Identified: No major bottleneck was identified during normal testing. Performance should be monitored when many users access records simultaneously.

Optimization Steps Taken: The ACL script was kept simple by checking only the required field value and avoiding unnecessary database queries.

Step 5: Screenshots / Evidence

- Screenshot 1 – ACL configuration and script

- Screenshot 2 – Allowed record access
- Screenshot 3 – Restricted record access / Access Denied
- Screenshot 4 – Postman performance result (if available)
